All metal food and beverage cans such as pop, beer, soup, vegetable, and tuna can be recycled in your community's recycling program. Cans should be emptied, rinsed, and then recycled.

[video] Learn more about [recycling cans](#).

Cans are made from either steel or aluminum. Aluminum cans you put in your curbside recycling are processed and turned back in to new cans and foil that you'll see on store shelves. Steel cans are recycled into new cans, car parts, and even bridges.

Aluminum beverage cans may be turned in for cash at a local scrap yard. Also, some area fire stations collect cans to benefit the Aluminum Cans for Burned Children of Northeast Ohio program. Check with your local fire station or find details for [your community](#).

Do not include scrap metal, car parts, wire and cord, or other metal objects in your curbside recycling. These metal objects are dangerous for the workers and the sorting machinery at the Materials Recovery Facility (MRF or recycling plant). Take the items to a local scrap yard.

Apartment and condominium dwellers can recycle too. See our [blog post about recycling options in your building](#).
